Introduction to UI Design Studio

UI Design Studio is a portal for managing and distributing reusable assets like **templates, design stencils, icons, components, themes** and so on.

This portal allows users to manage projects along with projects artifacts which can be customized as per project requirements and branding guidelines. It also allows registration of users as contributors to **contribute templates, themes, icons, design stencils, components** etc.

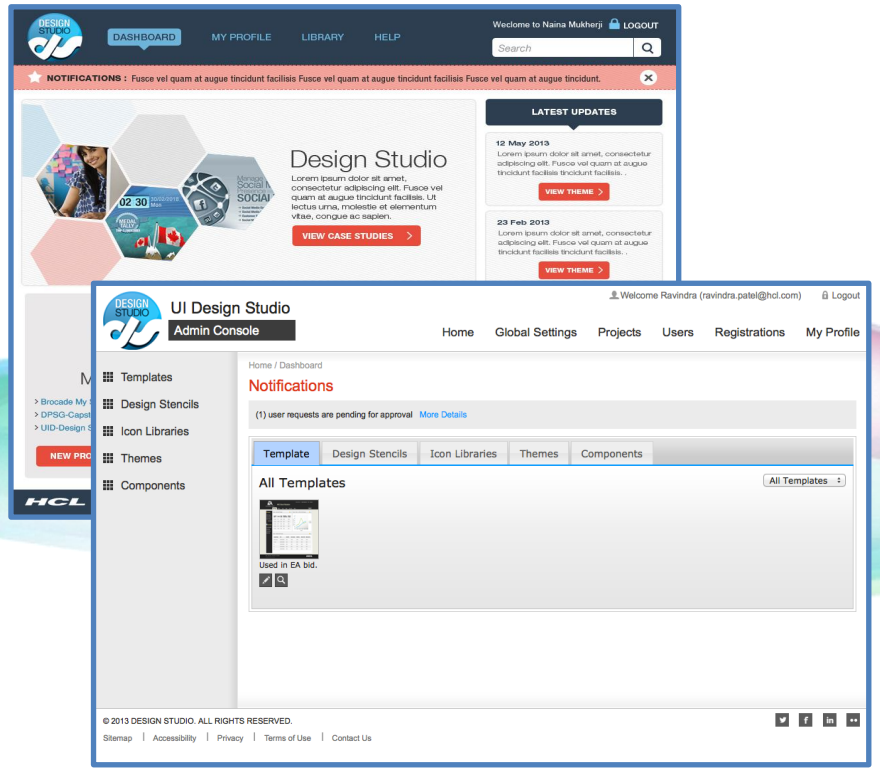
This portal includes advanced searching techniques to search templates/components based business domains, targeted platforms, form factors, browsers, responsive web design and so on. This enables rapid application development with **pre-customized, reviewed and ready to use templates, components, design stencils** etc.

Running application available at
http://www.menmyconnects.com/apps/uids/public/

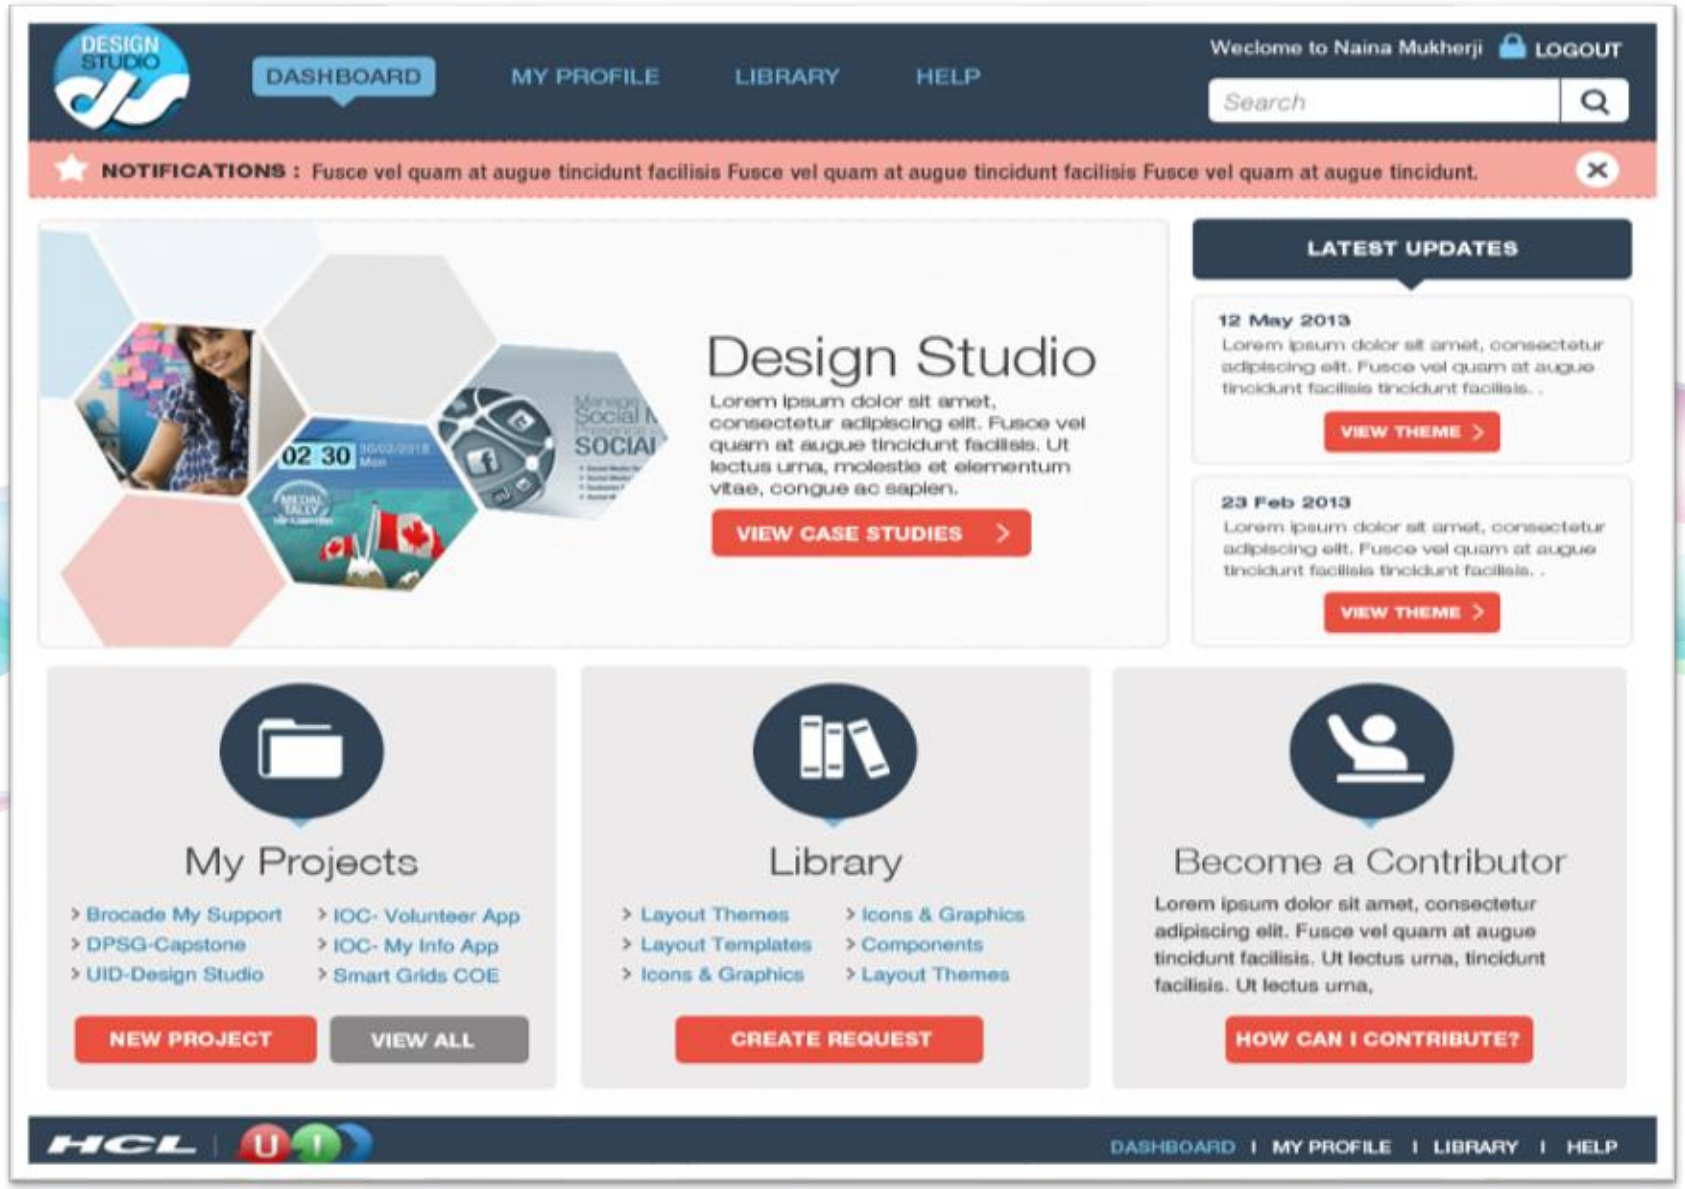
UI Design Studio includes an admin portal to **manage projects, users, projects and contribution of templates, components** etc.

Features

- Repository of ready to use and **customizable templates, components and design stencils**.
- Advanced searching based on **domains, browser support, categories, platforms, form factors** etc.
- **Robust** and **cross browser compatible** UI Components.
- Project management along with project specific **template, theme, design stencils, components** etc.
- **Responsive Web Design** ready UI components and templates.
- Latest framework support – **jQuery, Bootstrap, Backbone, Knockout** etc.
- **Download and Project tracking**
- Inbuilt **feedback, review and support systems**



System Design : Public Site



System Design : Public Site

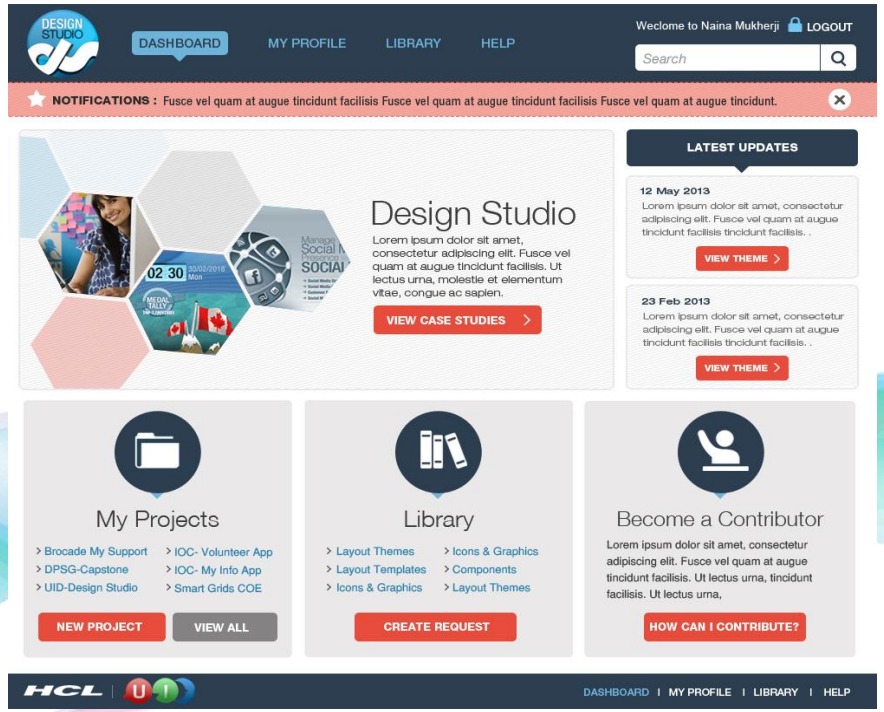
Running application available at
http://www.menmyconnects.com/apps/uids/public/

Home Page

This is the landing page of public site. It includes following functionalities –

1. Featured templates listing for previews and downloads
2. User login widget
3. News and updates
4. Search templates, icons, components
5. Viewing contributor profiles.
6. User registration
7. Contact Us
8. Browse by categories

System Design : Public Site



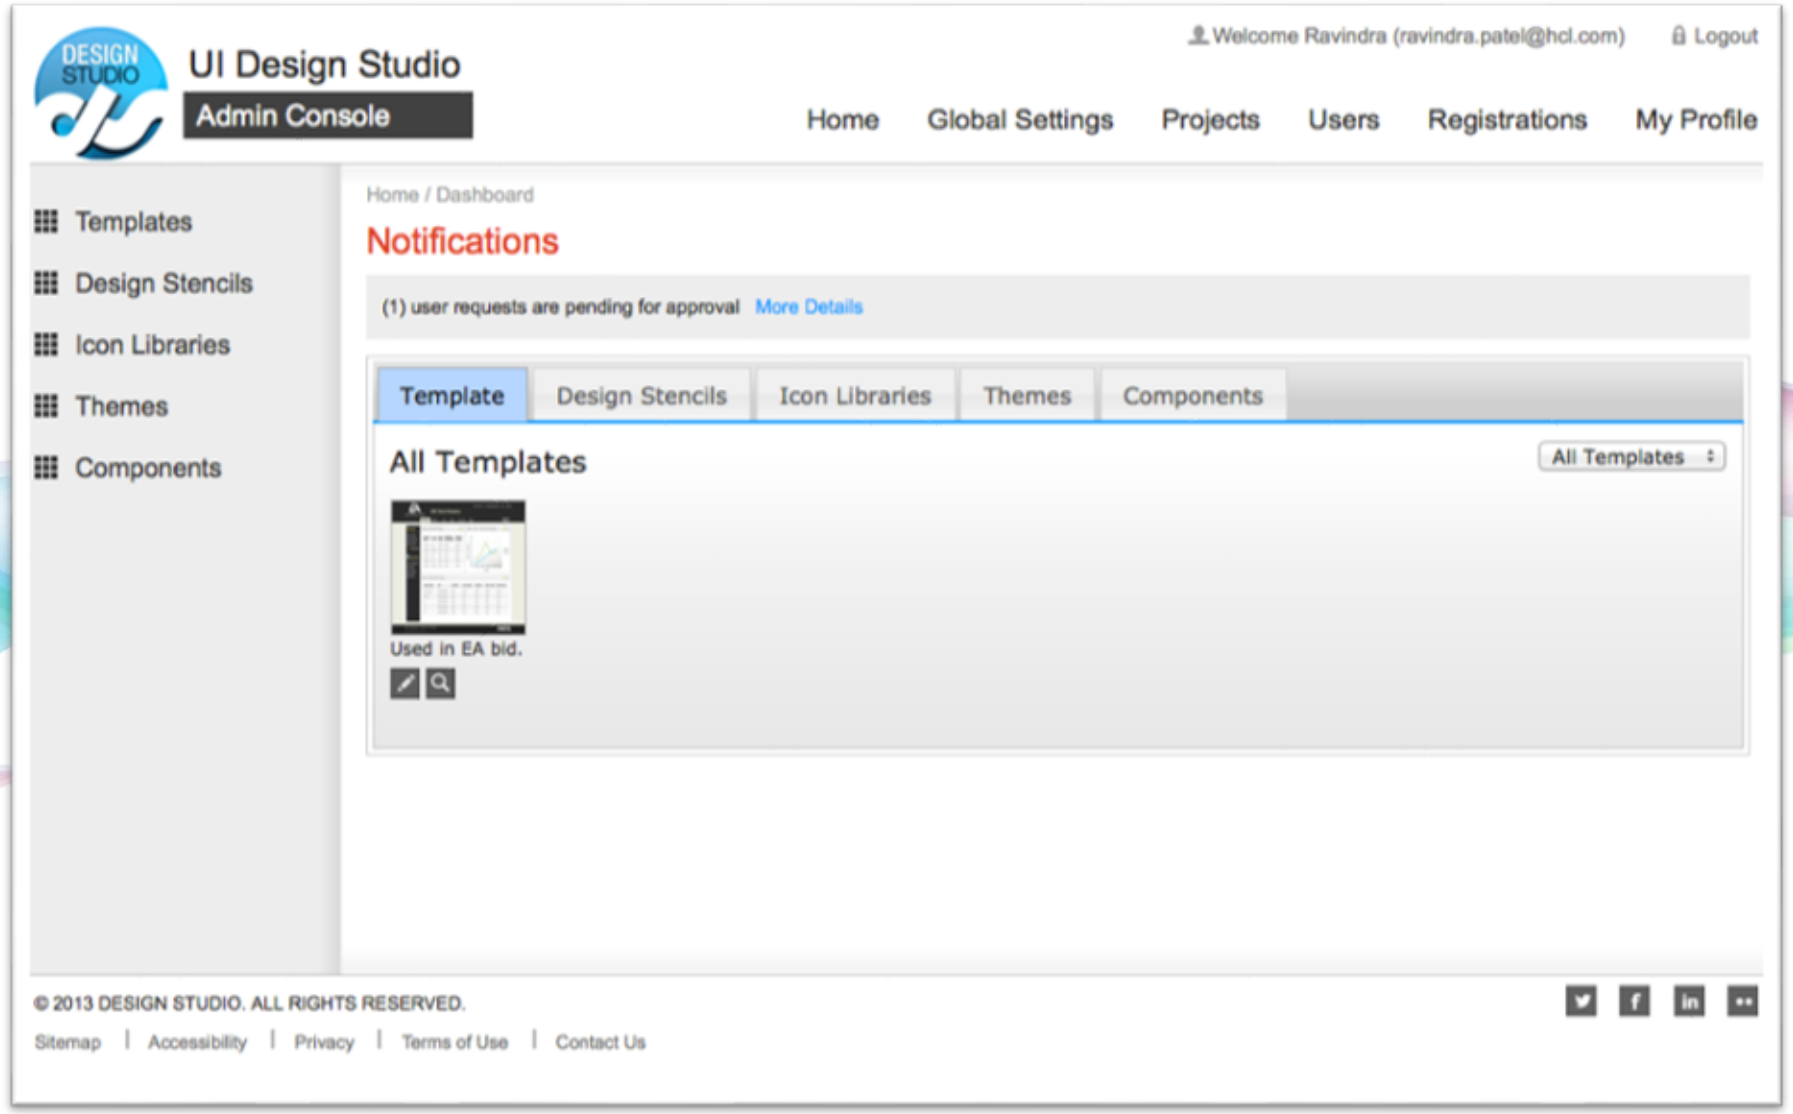
Running application available at
http://www.menmyconnects.com/apps/uids/public/

Dashboard Page

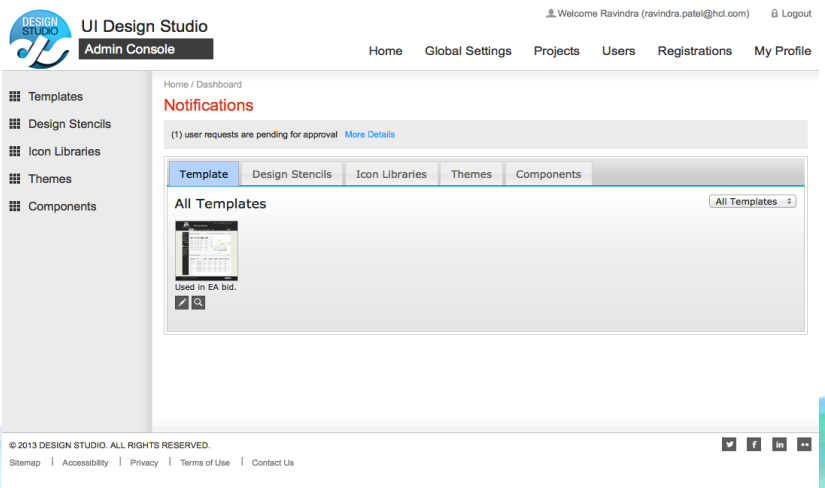
This is the default page after user login. It includes following functionalities –

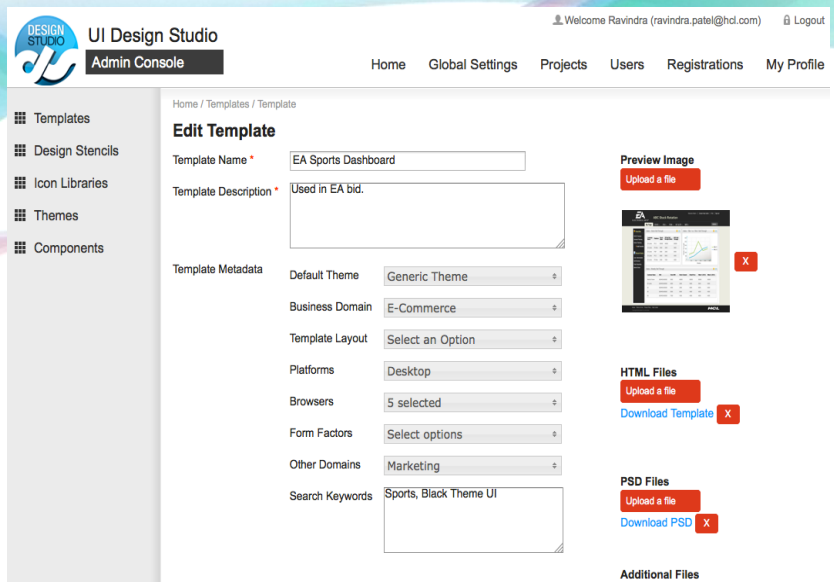
1. Manage User Projects
2. Search Library
3. Become a contributor
4. Browse case studies
5. Write support tickets

System Design : Admin Console



System Design: Admin Console





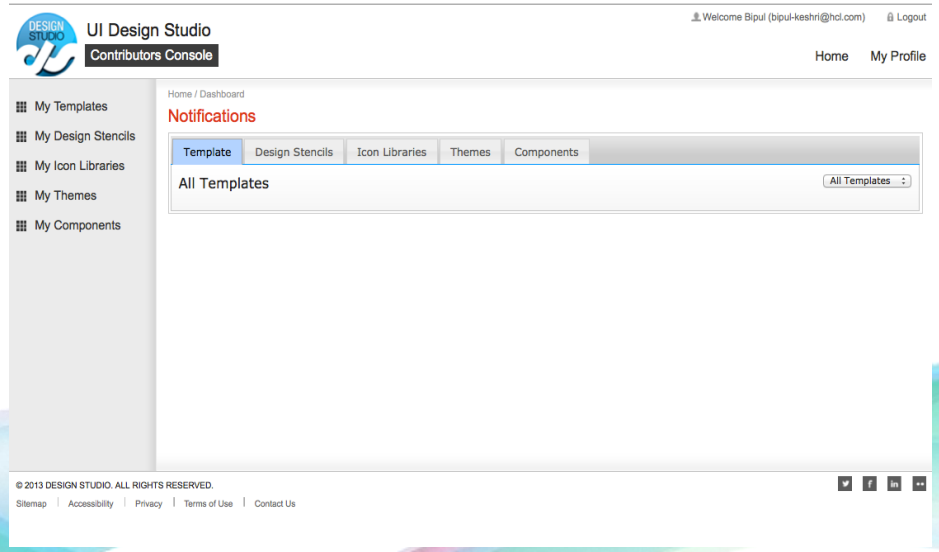
Admin console is used for managing all resources of the system. It has role based access to the system features.

Admin console includes following functionalities –

1. Manage Templates
2. Manage Design Stencils
3. Manage Icons
4. Manage Components
5. Manage Themes
6. Manage Global Settings
7. Manage Users
8. Manage Projects
9. Manage Registrations
10. Manage Approval of contributions

Running application available at
http://www.menmyconnects.com/apps/uids/admin/

System Design: Contributor Console



Running application available at
http://www.menmyconnects.com/apps/uids/admin/

Contributor console is used for uploading and managing individuals contributions. It's the admin console with limited permissions managed by administrators.

It includes following functionalities –

1. Manage User Templates
2. Manage User Design Stencils
3. Manage User Icons
4. Manage User Components
5. Manage User Themes
6. Manage User Profile

UI Development: Traditional vs UI Design Studio

Traditional

UI Design Studio

Ready to use Templates/Components/Visual Designs

→

Customization
- Wireframes
- Visual Designs
- HTML/CSS
- Components

→

Total Efforts: 10 Days

Approx. Efforts Saving – 40-60 % (Depending on requirements)

Benefits

- Easier and faster web development.
- Centralized and searchable repository of web application components – templates, icons, UI components, visual designs etc.
- Less development and customization efforts.
- Web documented and structured HTML and CSS code for further development and customization.
- Consistent UI component across application.

Project Plan and Releases

Release	Implementation	Status
ALPHA	Database Schema	Done
	Admin Login and Dashboard	Done
	Global Settings	Done
	Contribution Approval	Done
	Contributor Login & Dashboard	Done
	Upload Contribution (Templates Only)	Done
	User Home Page	Done
	Search Templates	WIP
	User Login and Downloads	Done
	User Projects	Done
Expected Release Date(ALPHA)	05-Jul-13	
BETA	Upload Contributions (Themes, IconSets, Components)	Pending
	Theme Customization	Pending
	Page Composition and Customization	Pending
	User Management	Done
	Contribution Management	Done
	Layout Customization	Pending
	Notifications	Pending
	Messages and Communication	Pending
	Component Integration	Pending
Expected Release Date(BETA)	23-Aug-13	
FINAL	Wishlist Management	Pending
	Help and Support Queries	Pending
	Component Customization	Pending
Expected Release Date(FINAL)	10-Oct-13	

Future Scope

- Integration with project management tools and portals.
- Repository of gesture enabled UI components.
- Repository of voice enabled components and tools.

Dependencies

UI Design Studio is PHP based solution, which requires a web hosting environment to deploy.

Below are the development and deployment dependencies -

Dependency	Specifications	Priority	Comments
Hosting Environment	Windows/Linux Server PHP Hosting Environment 4GB RAM 500 GB Hard Disk HTTP/HTTPS Access	High	Need for development, testing and production deployment
Testing Devices	Android Tablet and Phone iOS Tablet and Phone	Medium	Need for testing responsive components and multi form factor capabilities
